

Design and implement a menu driven GUI application in Java programming language that has the following features:

- a) Colorfully designed with relevant collection of important attributes
- b) Connected with backend mySQL database
- c) Should be able to add new record information to database
- d) Should be able to search for record from database
- e) Should be able to edit and update record from table in the database
- f) Should be able to delete unwanted record from database.

S/N	Project Description	Group Name
1	Stock and Inventory System	1
2	Students Management System	2
3	Students Attendance system	3
4	Customers management system	4
5	Agric products stock management system	5
6	Hotel management system	6
7	Facilities management system	7
8	Assets tracking management system	8
9	Vehicles management system	9
10	Employees management system	10
11	Lecturers Information system	11
12	Vendors management system	12
